The 48 experiments in this well-conceived manual illustrate important concepts and principles in general, organic, and biochemistry. As in previous editions, three basic goals guided the development of all the experiments: (1) the experiments illustrate the concepts learned in the classroom; (2) the experiments are clearly and concisely written so that students will easily understand the task at hand, will work with minimal supervision because the manual provides enough information on experimental procedures, and will be able to perform the experiments in a 2-1/2 hour laboratory period; and (3) the experiments are not only simple demonstrations, but also contain a sense of discovery. This edition includes many revised experiments and two new experiments. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version. This full-color, comprehensive, affordable manual is intended for a one-semester general, organic, and biochemistry course, preparatory/basic chemistry course, liberal arts chemistry course, or allied health chemistry course. The procedures are written with the goal of simplifying a complicated and often challenging subject for students by applying concepts to everyday life. The first half of the lab manual covers general topics such as chemical and physical properties, elements of the periodic table, types of bonds, empirical formulas, and reaction stoichiometry. These labs form the foundation for future labs, which cover the basics of organic and biological chemistry. Experiments include the classification of organic compounds and the determination of biomolecules. By the end of this course, students should have a solid understanding of the basic concepts of chemistry, which will give them confidence as they embark on various allied health careers.
